

The Ukrainian company LLC MOI Tech specializes in the development of software for business process management and automation.

UGLA ERP was founded in 2022 in Kyiv with the goal of facilitating business process management, increasing productivity, and enhancing the competitiveness of enterprises. Ukrainian ERP offers an intuitive and powerful toolkit for business process automation, as well as data analysis and visualization to help companies make more informed decisions.

Enterprise Resource Planning (ERP) systems are a key tool for effectively managing businesses of various industries and sizes. However, many existing ERP systems are known for their complexity and excessive bureaucracy, leading to challenges in their implementation and use.

The new generation Ukrainian ERP has the following key features:

Simplicity and intuitiveness: The new UGLA ERP system promises to provide users with an intuitive and simple interface, ensuring easy use without hours of training.

Data security: Maintaining the confidentiality and security of user data is a high priority for the new ERP startup.

Streamlining management: Enhanced analytics and reporting tools help businesses make informed decisions and optimize their operations.

PWA version: The PWA version of UGLA allows users to access their data and control business processes anytime, anywhere.

Advanced analytical capabilities: UGLA has implemented advanced analytical tools that help businesses find valuable information in their data and use it for strategic decision-making.

Integration with external services: UGLA has integrated with popular services, making it easy to use other tools.

Investor solutions: UGLA ERP helps investors monitor the movement of their investments and the targeted use of funds. For companies that have attracted investments, this helps maintain transparent reports.
